The first destination from Kolbert's field notes on climate change is the Alaskan village of Shishmaref. The island has been populated for many generations, but in recent decades due to melting ice and rising seas, the village must relocate to survive. Too many homes are flooding or being swept away by rising waters.

About Field Notes from a Catastrophe. An argument for the urgent danger of global warming in a book that is sure to be as influential as Rachel Carson's Silent Spring. Long known for her insightful and thought-provoking political journalism, author Elizabeth Kolbert now tackles the controversial and increasingly urgent subject of global warming.

Field Notes from a Catastrophe: Man, Nature, and Climate ...

An argument for the urgent danger of global warming in a book that is sure to be as influential as Rachel Carson's Silent Spring. Known for her insightful and thought-provoking journalism, New Yorker writer Elizabeth Kolbert now tackles the controversial subject of global warming. Americans have been warned since the late nineteen-seventies that the buildup of carbon dioxide in our atmosphere threatens to melt the polar ice sheets and irreversibly change our climate.

New Yorker writer Kolbert tackles the controversial subject of global warming. Americans have been warned since the late 1970s that the buildup of carbon dioxide in our atmosphere threatens to melt the polar ice sheets and irreversibly change our climate. With little done since then to alter this dangerous course, now is the moment to salvage our future. By the end of the

century, the world will likely be hotter than it's been in the last two million years, and the sweeping consequences of this change will determine the future of life on earth for generations to come. Kolbert approaches this monumental problem from every angle. She travels to the Arctic, interviews researchers and environmentalists, explains the science and the studies, draws frightening parallels to lost ancient civilizations, unpacks the politics, and presents the personal tales of those who are being affected most--the people who make their homes near the poles and are watching their worlds disappear.--From publisher description.

A new edition of the book that launched Elizabeth Kolbert's career as an environmental writer--updated with three new chapters, making it, yet again, "irreplaceable" (Boston Globe). Elizabeth Kolbert's environmental classic *Field Notes from a Catastrophe* first developed out of a groundbreaking, National Magazine Award-winning three-part series in *The New Yorker*. She expanded it into a still-concise yet richly researched and damning book about climate change: a primer on the greatest challenge facing the world today. But in the years since, the story has continued to develop; the situation has become more dire, even as our understanding grows. Now, Kolbert returns to the defining book of her career. She has added a chapter bringing things up-to-date on the existing text, plus three new chapters--on ocean acidification, the tar sands, and a Danish town that's gone carbon neutral--making it, again, a must-read for our moment.

Long known for her insightful and thought-provoking political journalism, author Elizabeth Kolbert now tackles the controversial and increasingly urgent subject of global warming. In

what began as groundbreaking three-part series in the New Yorker, for which she won a National Magazine Award in 2006, Kolbert cuts through the competing rhetoric and political agendas to elucidate for Americans what is really going on with the global environment and asks what, if anything, can be done to save our planet. Now updated and with a new afterword, Field Notes from a Catastrophe is the book to read on the defining issue and greatest challenge of our times. Elizabeth Kolbert was a reporter for the New York Times for fourteen years before becoming a staff writer covering politics for the New Yorker. She and her husband, John Kleiner, have three sons. They live in Williamstown, MA. Praise for Field Notes from a Catastrophe: "[A] small miracle of concision, gaining by its brevity and its plan of attack a rhetorical power that elucidates, rises to meet and deftly answers the historic crisis in which we find ourselves." -Los Angeles Times "Important...Precise and measured. Visiting an Inupiat community in Alaska, a butterfly expert in England, or a midlevel Bush administration official in Washington, D.C., [Kolbert] lets readers connect the dots to form a frightening (and still avoidable) vision of our future...[Grade:] A." -Entertainment Weekly "If you have time this year for just one book on science, nature or the environment, this should be it."-San Diego Union-Tribune "Passionate...well-researched."-New York Times Book Review

Explores the issue of global warming from every angle, incorporating interviews with researchers and environmentalists, explaining the science and the studies, and presenting the personal tales of those who are being affected most.

In writing that is both clear and unbiased, Kolbert - an acclaimed New Yorker journalist-

approaches global warming from every angle. She travels to the Arctic, the North of England, Holland and Puerto Rico, interviews researchers and environmentalists, explains the science and the studies, draws frightening parallels to lost ancient civilizations, unpacks the politics, and presents the personal tales of those who are being affected most—the people who make their homes near the poles and, in an eerie foreshadowing, are watching their worlds disappear. Scientists have been warning the world since the late 1970s that the build-up of carbon dioxide in our atmosphere threatens to melt the polar ice sheets and irreversibly change our climate. With little done since then to alter this dangerous course, now is the moment for all the countries in the world, but perhaps especially the USA, to face up to the realities of global warming and to secure our future. By the end of the century, the world will probably be hotter than it's been in the last two million years, and the sweeping consequences of this change will determine the future of life on earth for generations to come. Field Notes from a Catastrophe brings the environment into the consciousness of the reader and asks what, if anything, can be done, and how we can save our planet.

The world has known about global warming since the late 1970s, yet little has been done to halt it. The threat, if we fail, is nothing less than catastrophe - the flooding of coastal communities, the extinction of species and entry into a climate regime of which humans have no experience. Exploring the relationship between what we know and what we refuse to know, Elizabeth Kolbert takes us on an urgent journey from the Arctic to Central America, interviewing researchers, environmentalists and traditional Inuits whose lives have already been dramatically altered by climate change.

It will, once again, be a must-read for our moment.

A journalist reassesses the complex workings of power in New York in a collection of incisive portraits of such figures as Boss Tweed, Hillary Clinton, Rudolph Giuliani, Michael Bloomberg, Al Sharpton, and others to explain why certain people attain power, how they use it, and how they lose it. 15,000 first printing.

ONE OF THE NEW YORK TIMES BOOK REVIEW'S 10 BEST BOOKS OF THE YEAR A major book about the future of the world, blending intellectual and natural history and field reporting into a powerful account of the mass extinction unfolding before our eyes Over the last half a billion years, there have been five mass extinctions, when the diversity of life on earth suddenly and dramatically contracted. Scientists around the world are currently monitoring the sixth extinction, predicted to be the most devastating extinction event since the asteroid impact

that wiped out the dinosaurs. This time around, the cataclysm is us. In *The Sixth Extinction*, two-time winner of the National Magazine Award and *New Yorker* writer Elizabeth Kolbert draws on the work of scores of researchers in half a dozen disciplines, accompanying many of them into the field: geologists who study deep ocean cores, botanists who follow the tree line as it climbs up the Andes, marine biologists who dive off the Great Barrier Reef. She introduces us to a dozen species, some already gone, others facing extinction, including the Panamanian golden frog, staghorn coral, the great auk, and the Sumatran rhino. Through these stories, Kolbert provides a moving account of the disappearances occurring all around us and traces the evolution of extinction as concept, from its first articulation by Georges Cuvier in revolutionary Paris up through the present day. The sixth extinction is likely to be mankind's most lasting legacy; as Kolbert observes, it compels us to rethink the fundamental question of what it means to be human.
