Storage networking is a crucial component of the solution to meet that challenge. Written for both storage administrators who need to learn more about networking and network administrators who need to learn more about storage, "Storage Networking Protocol Fundamentals "is a concise introduction to storage networking protocols.

In computer storage, a logical unit number, or LUN, is a number used to identify a logical unit, which is a device addressed by the SCSI protocol or by Storage Area Network protocols that encapsulate SCSI, such as Fibre Channel or iSCSI.. A LUN may be used with any device which supports read/write operations, such as a tape drive, but is most often used to refer to a logical disk as created on

Storage Replica queries for and automatically uses thin-provisioned storage, including non-clustered Storage Spaces, Hyper-V dynamic disks, and SAN LUNs. You can also use seeded data volumes to reduce bandwidth usage and sometimes time, by ensuring that the destination volume has some subset of data from the primary then using the Seeded option in Failover Cluster Manager or New-SRPartnership .
