Our 1st edition California 6th Grade Math Test Prep for Common Core State Standards is an excellent resource to assess and manage student's understanding of concepts outlined in the Common Core State Standards Initiative. This resource is formatted into three sections: Diagnostic, Practice, and Assessment with multiple choice in each section. The material covered includes understanding ratio concepts and using ratio reasoning to solve problems; applying and extending previous understandings of multiplication and division to divide fractions by fractions; computing fluently with multi-digit numbers and find common factors and multiples; applying and extending previous understandings of numbers to the system of rational numbers; applying and extending previous understandings of arithmetic to algebraic expressions; reasoning about and solving one-variable equations and inequalities; representing and analyzing quantitative relationships between dependent and independent variables; solving real-world and mathematical problems involving area, surface area, and volume; and developing an understanding of statistical variability. These standards are covered extensively by the practice problems. This book contains over 1000 practice problems aligned to each Common Core State Standard. In addition the book contains an answer key to practice problems. Paperback: 358 double-sided pages

The United States Department of Education found the annual 8th grade General Math California Standards Test to be out of compliance with the No Child Left Behind Act since it assesses 6th and 7th grade math standards. The California State Board of Education passed a math policy that requires all students to take the Algebra California Standards Test, thereby mandating algebra courses for all. This study seeks to understand what impact this policy may have on math performance among the lowest performing math students. I analyze student data from a large, diverse, urban school district. Employing a series of descriptive analyses I compare those students in the lower tenth percentile on the 7th grade math California Standards Test to those in the upper ninetieth percentile. I then track these students from the 7th to the 9th grade to determine math course

promotional patterns over time. Then, selecting only students that performed in the lower tenth percentile, they are classified by their 8th grade General Math Only and Algebra Only math course placements. I employ Ordinary Least Squares regression to determine the relationship between math course type and students' academic outcomes. Math course placement appears to be policy-driven towards placement in algebra content courses rather than by the student's math skills. Any algebra course content increases the likelihood of repeating the math course level. As the algebra course content becomes more rigorous the likelihood of repeating the math course level increases. Eighth grade math course placement does predict General Math California Standards Test scores, however the effect is mediated when controlling for other factors and disappears when accounting for school differences. Eighth grade algebra course placement is statistically significantly negatively related (p
