The stack is supported and certified for eZ Publish Platform 5. This means that our QA certification team has successfully run intensive certification tests on the platform, and that we can fully support the platform in the scope of an eZ Publish Subscription. The reference stack for eZ Publish Platform 5 is based on Red Hat Enterprise Linux 6.

~~Requirements 5.3~~ ~~eZ Publish 5.x~~ ~~eZ Documentation~~

eZ Publish 5 being built on top of Symfony 2, it uses standard HTTP cache headers. By default the Symfony 2 reverse proxy, written in PHP, is used to handle cache, but it can be easily replaced with any other reverse proxy like Varnish. Use of Varnish is a requirement for use in Clustering setup, for overview of clustering feature see Clustering.

It contains a PHP 5 port of eZ Publish 3.9. It was started by the eZ Publish Community. eZ Systems has adopted the port and based on the initial work done by the community, they were able to release eZ Publish 4 in December 2007. It is recommended that you use the official version from eZ Systems, because no further updates will be done on the community port.
