This text presents an accessible introduction to techniques and applications of economic analysis and financial accounting as a method for approaching real-life business problems for managerial decision making in a logical manner. It focuses on the essential skills needed to formulate business policies that help gain a competitive edge in today 's work environment. The book discusses the basic concepts, terminology, and methods that eventually allow students to interpret, analyse, and evaluate actual corporate financial statements. It covers the major areas of managerial economics and financial accounting such as the theory of the firm, the demand theory and forecasting, the production and cost theory and estimation, the market structure and pricing, investment analysis, accountancy, and different forms of business organisations. The book includes numerous examples, problems, self-assessment tests, as well as review questions at the end of each chapter to aid in working out solutions to business problems. The book will be particularly suitable for courses in Managerial Economics and Financial Accounting as part of an engineering degree education at undergraduate level where the students have no previous back-ground in economic and financial analysis. It will also be immensely useful for M.B.A., M.Com. and C.A. students, business exe-cutives, and administrators who need to learn the application of economic theory to realistic business situations.

While Managerial Economics is the application of economics in decision making, financial analysis judges financial performance of a firm. Several methods of analysis have been examined in the book, the two main tools being ratio analysis and analysis of balance sheet and profit and loss account of the firms. The book examines several steps involved in financial analysis: Establishing the objectives of the analysis Studying the various operations of the industry Collection of information relevant for preparing financial statements and their evaluation Salient Features Chapter summaries, problems and their solutions at the end of each chapter. Multiple Choice Questions (MCQs) along with answers provided at the end of the Book.

The purpose of this book is to provide, in one volume, the various economic theories and Financial Analysis which are deemed to constitute the subject-matter of Managerial Economic and Financial Analysis. This book is intended to explain in non-technical language, the economic concepts, tools of analysis and their relevance to business decision-making, and also the influence of economic environment on business.The book provides a sound understanding Managerial Economics and Financial Analysis concepts with empirical knowledge, problems and practical experience generated. It adopts a systems view-point, consisting of interrelated and interdependent facts examined.
