The emotional brain represents one of the 'three brains' proposed by neuroscientist Paul MacLean in his 'Triune Brain' model. MacLean referred to the limbic system, which is largely in control of the human emotional response, as the paleomammalian brain. This region is thought to have developed some time after the 'reptilian', or primal, brain.

leading authority in the field of neural science. In this provocative book, he explores the brain mechanisms underlying our emotions -- mechanisms that are only now being revealed.

The Emotional Brain: The Mysterious Underpinnings of ...

The emotional brain is greatly affected by the environment the individual grows up in and research continues to be done on how the environment might influence the architecture of the brain. The brain and its relation to emotions is incredibly complex and there is no doubt that affective neuroscience is often limited by the subjective nature of studying human emotions as well as the difficulty to test for emotions.

The emotional brain's learnings are usually locked and not modifiable. However, once an emotional schema is activated, it is possible to simultaneously bring into awareness knowledge contradicting the active schema. When this happens, the information contained in the schema can be overwritten by the new knowledge.
