Looking in Classrooms uses educational, psychological, and social science theories and classroom-based research to teach future classroom teachers about the complexities and demands of classroom instruction. While maintaining the core approach of the first ten editions, the book has been thoroughly revised and updated with new research-based content on teacher evaluation, self-assessment, and decision-making; special emphases on teaching students from diverse ethnic, cultural, class, and gender-identity contexts; and rich suggestions for integrating technology into classroom instruction. Widely considered to be the most comprehensive and authoritative source available on effective, successful teaching, Looking in Classrooms synthesizes the knowledge base on student motivation, classroom management, teacher expectations, teacher effectiveness, adaptive instruction for individual learners, and informative observational techniques for enhancing teaching. It addresses key topics in classroom instruction in an accessible fashion, promoting easy intepretation and transfer to practice, and articulates the roles of teacher-centered pedagogy, student-centered instruction, and project-based learning in today's classroom. Guided by durable historical knowledge as well as dynamic, emerging conceptions of teaching, this text is ideal for undergraduate teacher training programs and for masters-level courses for teachers, administrators, and superintendents.

Mastering the language of schooling is essential for learners to develop the skills necessary for school success and for critical thinking. It is fundamental for participation in democratic societies, and for social inclusion and cohesion. This handbook is a policy and working document which promotes convergence and coherence between the linguistic dimensions of various school subjects. It proposes measures to make explicit – in curricula, pedagogic material and teacher training – the specific linguistic norms and competences which learners must master in each school subject. It also presents the learning modalities that should allow all learners, and in particular the most vulnerable among them, to benefit from diversified language-learning situations in order to develop their cognitive and linguistic capacities.

There is much attention currently being given to argument-based inquiry in national and state curriculum documents. Students are being required to be able to generate and evaluate science knowledge, and to think critically and judge the value of evidence and explanations. The intent of the book is to provide a rich and broad view of the impact of argument-based inquiry in the elementary classrooms from the perspective of the teacher. All the teachers and professional development authors were engaged in promoting and using argument based inquiry as the approach to teaching science. They were implementing the Science Writing Heuristic (SWH) approach as the argument based approach for classroom practice. As researchers we constantly work to present our views of these experiences with the voice of the teachers only being relayed through the perspective of the researcher. The intent of this book is to provide an opportunity for us as a community to listen to what the teachers are telling us. Importantly as demands are being placed on classroom experiences that provide opportunities for students to pose questions, make claims, and provide evidence, that is, to think critically and reason like scientists, we need to understand what this looks like from the perspective of the teacher. This book brings together a range of elementary teachers from kindergarten through to year 6 who have used the Science Writing Heuristic approach to teach argument-based inquiry. These teachers have all gone through professional development programs and successfully implemented the approach at a high level.
